

Phone - 330.683.7777

Our company is growing.....

We currently have 4 great CNC positions available

The right candidate would show:

Strong math skills for inputting specific dimensions and figures accurately

Knowledge of inspection process and associated tools as well as safety protocol for manufacturing

Ability to analyze, read, and follow the information provided on blueprints or other explanatory documents to make sure the final product matches the draft and make adjustments using offsets

Strong computer skills critical to safe operation and quality output of multiple CNC machines

Clear Understanding of how the machine works to maintain the machinery for which they are responsible, build troubleshooting skills and be eager for additional training opportunities

Problem-solving skills in order to detect issues in the creation process and find solutions to ensure the machinery creates the product provided in the draft and shop order

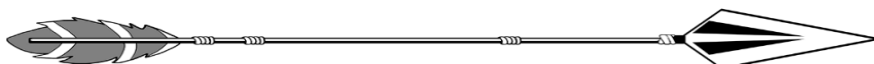

Considerations: High school diploma, trade school, with all other certificates specific to the field in which they hope to work, Strong professional / personal references, and attendance history with other employers will be considered in the selection process.

Rate of pay is considered after skill evaluation / interview and 90-day evaluation could increase pay for the team member from the initial hire agreement. We take good care of our team!

We offer: excellent health, dental, and vision benefits after 30 days of employment. We also have 401k investment plans, short- & long-term disability as well as life insurance. 7 Paid Holidays per year, Safety equipment reimbursement options.
